

Steps to Getting Started with ChatGPT

ChatGPT is an A.I. program designed to respond in a conversational way to prompts you give it. Use this checklist to get started using it.

Step 1

Go to OpenAI website or chat.openai.com & click on the Try ChatGPT button.

Step 2

Login or sign up using your email address and other details.

Step 3

Look over the disclaimers.

Step 4

Start interacting with ChatGPT. The message box is near the bottom of the interface. Use this to begin a conversation.

Step 5

Type in your question, statement, or other prompt. Use clear, concise, relevant and specific words in your prompt.

Step 6

ChatGPT will begin generating a response. You can always start with a simple question like "What is Bitcoin?" If you are unhappy with the response you get, click the regenerate button.

Step 7

Continue the conversation by reply to ChatGPT using the message box. Or click on the "New Chat" button on the left sidebar to start a new conversation.

Step 8

Continue with the conversation until you are satisfied or have all the information you need.

Step 9

Copy the conversation content to save it in a doc file if you want.
